VIRTUAL EMBRYO CHALLENGE

# Anatomy of a valid submission

What the scorer actually reads from your .h5ad file.

## AnnData / .h5ad

**.X** — **cells x genes**

finite, non-negative, log-normalized

**var_names** — **exact released order**

whole transcriptome for T1; panel for spatial tasks

**obsm["spatial_3D"]** — **T2/T3 only**

## Important scorer behavior

| | |
|---|---|
| **T1** | no coordinates required |
| **T2/T3** | first 3 spatial columns are read |
| **cells** | predicted count need not equal target |
| **celltype** | submission labels are ignored |
| **format** | checks are unlimited in every phase |
